

**Massachusetts ME/CFS & FM Association
Annual Meeting**

How Investigative Journalism Succeeds in a Hostile Medical Setting

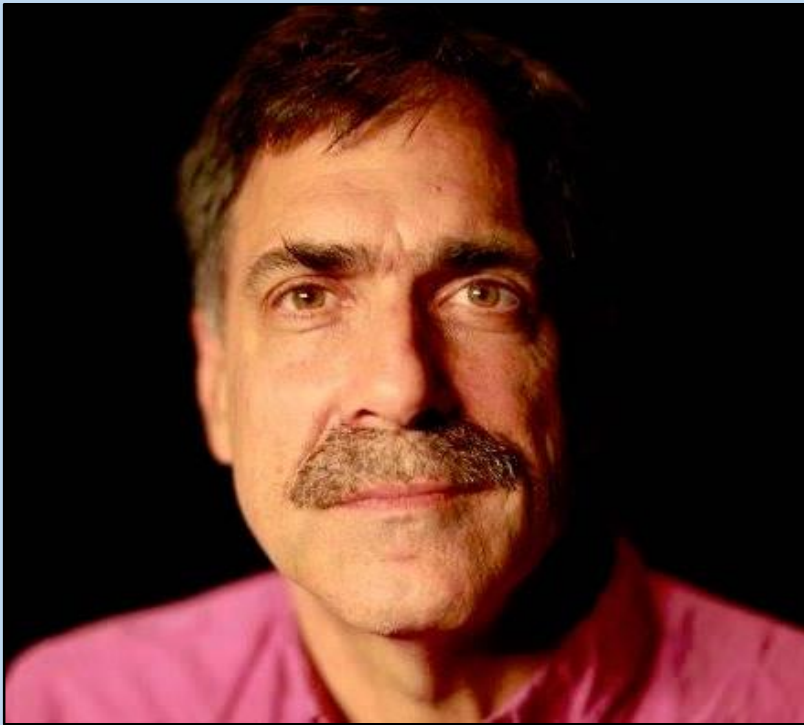

A CONVERSATION WITH DAVID TULLER

Saturday, Nov. 3, 2018, 1:00 – 3:30 pm

NEWTON WELLESLEY HOSPITAL

Bowles Conference Center, 2014 Washington St., Newton MA

Doors open 12:30 pm for check-in

David Tuller, DrPH, is a senior fellow in public health and journalism at the Center for Global Public Health at the Univ. of California, Berkeley. He was a reporter and editor for 10 years at the San Francisco Chronicle, served as health editor at Salon.com, and has frequently written about public health issues for The New York Times, the journal Health Affairs, and other publications. He has also written extensively about the illness ME/CFS on Virology blog.

Myalgic Encephalomyelitis/Chronic Fatigue Syndrome (ME/CFS) is a chronic, debilitating, multi-system illness that disables 1 - 2.5 million Americans. Many spend years – even decades – bedridden and homebound, with no FDA approved treatments.

**Open to the public,
healthcare professionals,
scientists & journalists**

Investigative journalist David Tuller is playing a leading role in a global effort to re-examine PACE, the largest clinical trial on ME/CFS. PACE wrongly psychologizes a physical disease and thus causes great harm to the 24+ million people with ME/CFS around the world. David will also discuss his experience as a journalist covering the huge yet underreported story of this disease.
